Abstract

The Faculty Management System is a Microservice on the E-Governance Platform of the Computer Science and Engineering Department of PSG College of Technology. It is a system used to maintain all data of faculty members in the department. It also has the provision to assign, maintain and manage tasks to the faculty by the Head of Department (HOD) and Program Coordinators (PC). It Provides real time notifications regarding tasks and other intimations from the department. A profile page is provided where the faculty can update his/her details. All faculty members' information will be available to the registered users through the portal on request. Faculty can maintain notes for anything as and when required.

The tasks assigned have associated priority levels and provision to upload files and attach links to external sites. Notifications can be created by the user or can also be auto-generated by the system in certain situations like when a new task is assigned.

The aim of this system is to track and maintain faculty details, tasks and notifications within the Computer Science department.

System Requirements

Hardware Requirements

Processor : 1 core @ 1.2 GHz (minimum),
2 cores @ 1.4 GHz (recommended)

RAM : 2 GB (minimum),
4 GB (recommended)

Internet Connectivity : 2 Mbps

Software Requirements

Operating Systems : Windows 7 and newer, MacOS
10.11 and newer, Linux 4.0 and newer

Browser : Any with internet connectivity

Entity Relationship Diagram

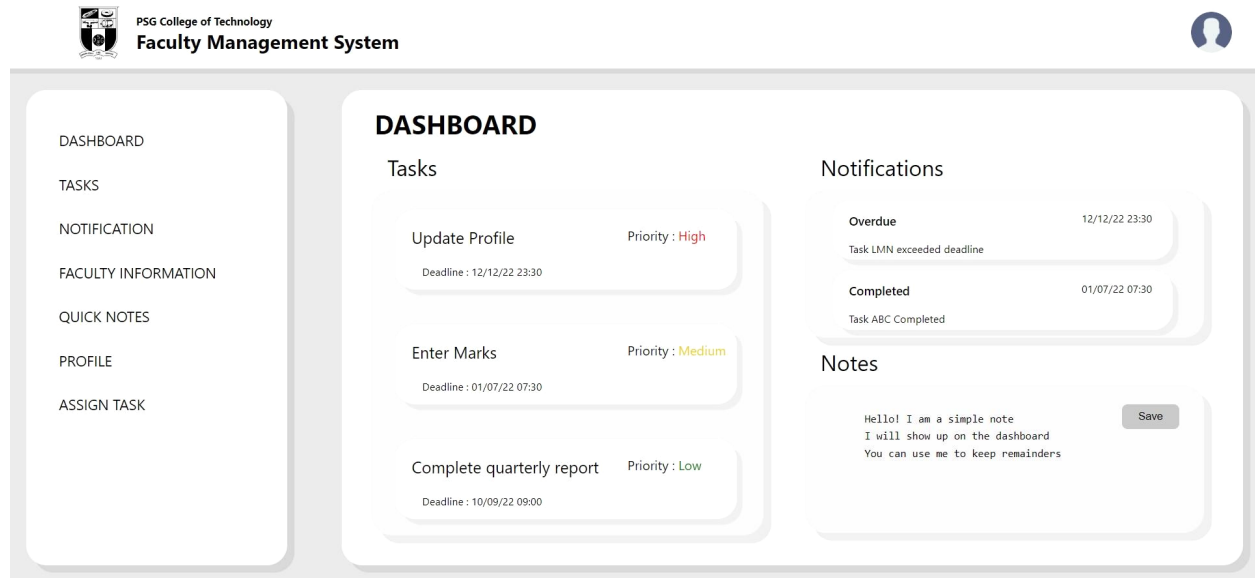

Normalization

The Attached ER diagram is normalized.

However denormalization can be applied to it to improve accessibility of certain data members. The Expertise and Research entities can include Names as this can make report generation easier. Similarly in notification and Tasks, Name can be added to make it easier to understand and access the data.

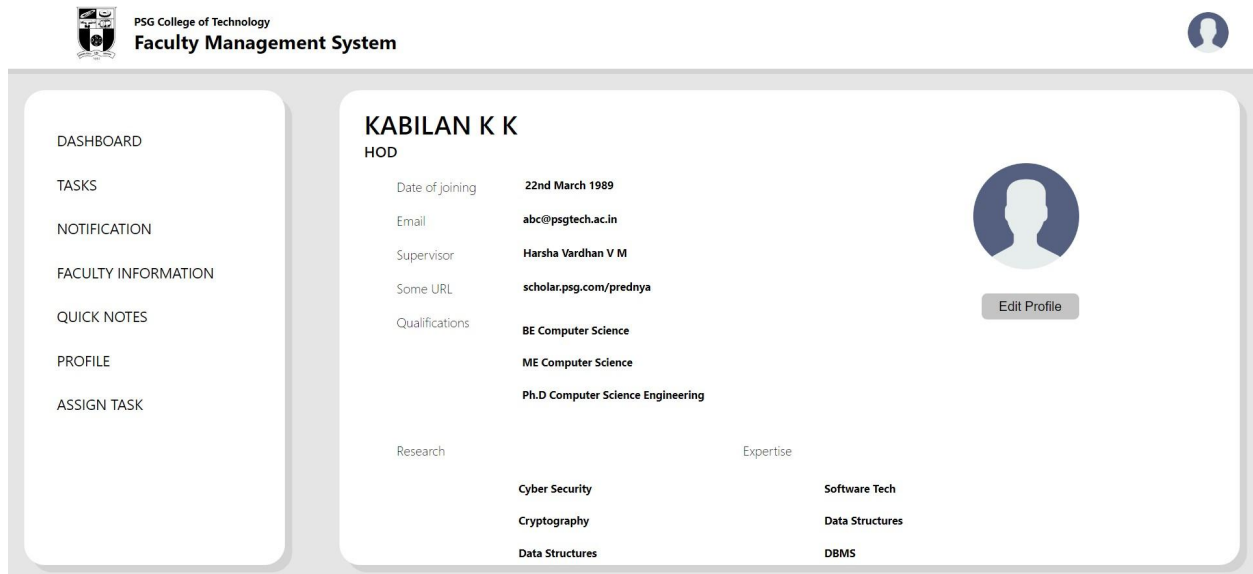

Modules

Dashboard

The Dashboard is the first page the user accesses after logging into the website. It has information about the latest 3 tasks, latest 2 notifications and the first 5 lines of the notes. All these widgets are loading information dynamically from the database. Clicking on any of them will take the user to the respective page. The notes can be edited directly from the dashboard. The side navigation bar is common to all the web pages.

Profile

The screenshot shows the 'Profile' page of the 'PSG College of Technology Faculty Management System'. The page is divided into a left sidebar and a main content area. The sidebar contains links to Dashboard, Tasks, Notification, Faculty Information, Quick Notes, Profile (which is highlighted), and Assign Task. The main content area displays the profile of 'KABILAN K K', who is the 'HOD'. It includes a profile picture placeholder with an 'Edit Profile' button. The profile details are organized into two columns: 'Date of joining' (22nd March 1989), 'Email' (abc@psgtech.ac.in), 'Supervisor' (Harsha Vardhan V M), 'Some URL' (scholar.psg.com/prednya), and 'Qualifications' (BE Computer Science, ME Computer Science, Ph.D Computer Science Engineering). Below this, there are two sections: 'Research' (Cyber Security, Cryptography, Data Structures) and 'Expertise' (Software Tech, Data Structures, DBMS).

PSG College of Technology
Faculty Management System

KABILAN K K
HOD

Date of joining: 22nd March 1989

Email: abc@psgtech.ac.in

Supervisor: Harsha Vardhan V M

Some URL: scholar.psg.com/prednya

Qualifications: BE Computer Science, ME Computer Science, Ph.D Computer Science Engineering

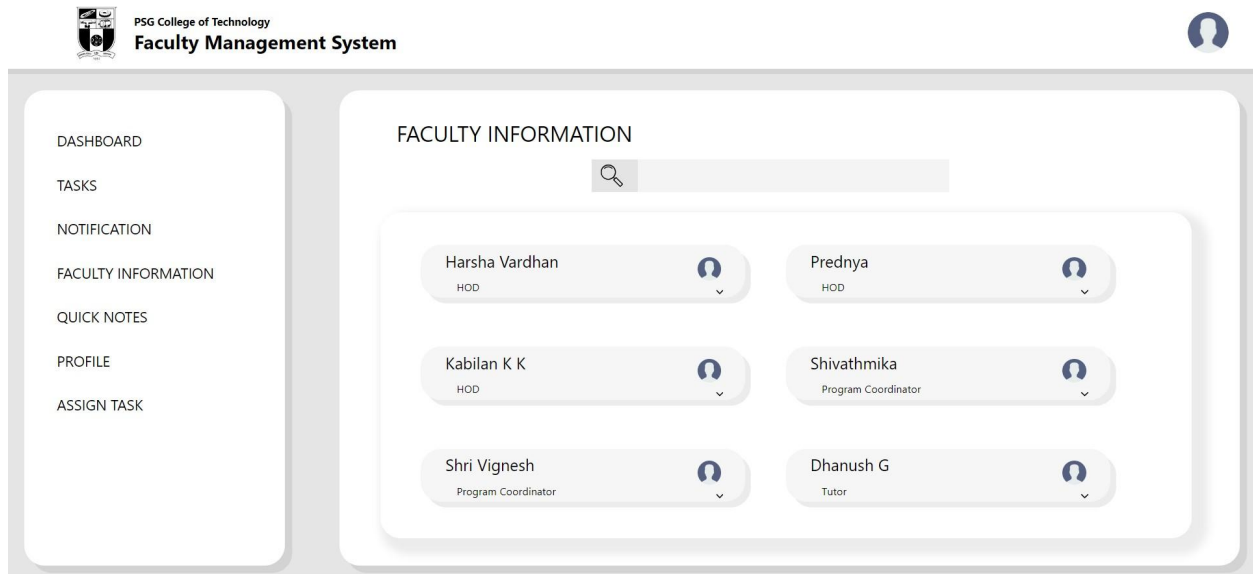

Research: Cyber Security, Cryptography, Data Structures

Expertise: Software Tech, Data Structures, DBMS

[Edit Profile](#)

The profile page has the user's basic information. It also has the information about research interests, expertise and contact details of the user. This information can be edited by the user at any time. Profile pictures can be updated by the user too.

Faculty Information

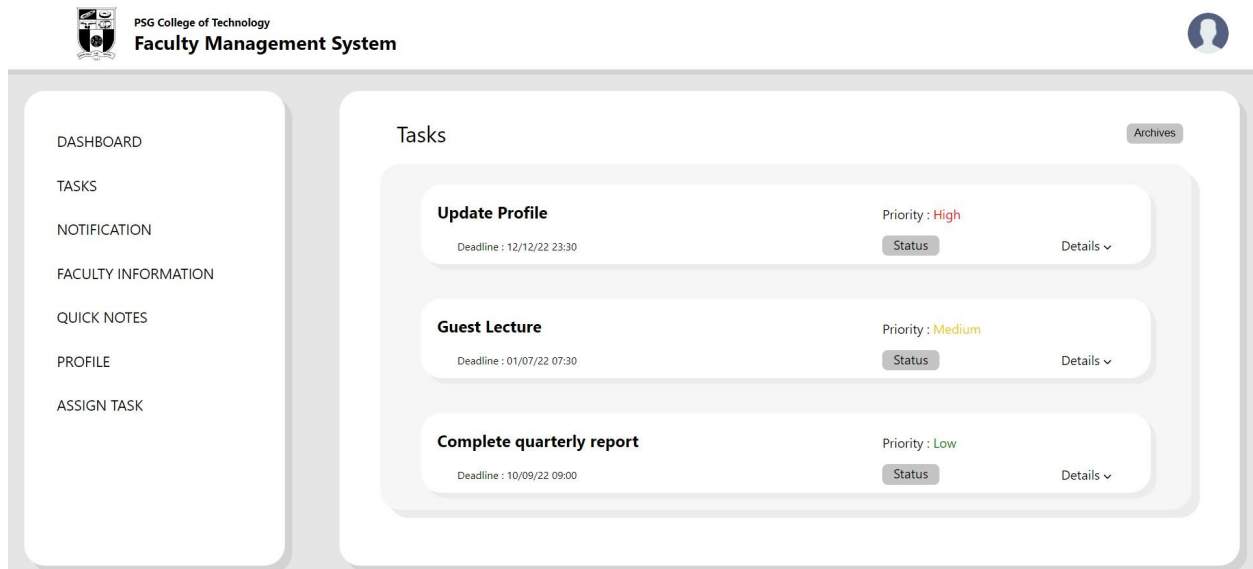

The screenshot shows the 'Faculty Management System' interface. On the left is a sidebar with navigation links: DASHBOARD, TASKS, NOTIFICATION, FACULTY INFORMATION (selected), QUICK NOTES, PROFILE, and ASSIGN TASK. The main content area is titled 'FACULTY INFORMATION' and features a search bar. Below the search bar, there are six faculty cards arranged in a 3x2 grid. Each card displays the faculty member's name, designation, and a profile icon with a dropdown arrow.

Name	Designation
Harsha Vardhan	HOD
Prednya	HOD
Kabilan K K	HOD
Shivathmika	Program Coordinator
Shri Vignesh	Program Coordinator
Dhanush G	Tutor

Faculty information page is used to search for a specific faculty. This can be done on the basis of name, designation, research and field of interest. The result set is the name and designation of the faculty for the search string. Their profile can be viewed by clicking on the card.

Tasks

The screenshot shows the 'Tasks' page in the 'Faculty Management System'. The sidebar is identical to the previous page, with 'FACULTY INFORMATION' selected. The main content area is titled 'Tasks' and includes an 'Archives' button. It displays three task cards, each with a title, deadline, priority, status, and a details dropdown.

Task Title	Deadline	Priority	Status	Details
Update Profile	12/12/22 23:30	High	Status	Details
Guest Lecture	01/07/22 07:30	Medium	Status	Details
Complete quarterly report	10/09/22 09:00	Low	Status	Details

Tasks Page is where the user can see all the tasks assigned to them. The main tasks page has a summary view of the most recent tasks. The title, deadline and priority will be displayed. By clicking on the details button, the expanded view of the tasks will be displayed. The expanded view will have all the information like who has assigned the task, description, current status, priority, file(s) attached and link(s) included. When a task is completed, it will be transferred to the archives. It can be viewed at any time. Creation of a new task will create a notification to be sent to that particular user.

Notifications

The screenshot displays the 'Faculty Management System' interface. The top header includes the college logo, the name 'PSG College of Technology', and the system title 'Faculty Management System'. A user profile icon is in the top right. The left sidebar contains navigation links: DASHBOARD, TASKS, NOTIFICATION, FACULTY INFORMATION, QUICK NOTES, PROFILE, and ASSIGN TASK. The main content area is titled 'Notifications' and features 'Archives' and 'Clear' buttons. It lists four notifications in descending order of date:

Notification Type	Message	Date & Time
Reminder	Task App is assigned in 1 Day	01/06/22 Time : 23:30
New Task	New Task assigned by Dr.Mohan	01/07/22 Time : 07:30
Overdue	Task exceeded deadline	29/05/22 Time : 09:00
Completed	Task Report done	25/05/22 Time : 07:00

Notifications page will have the list of notifications assigned to the user. They will be ordered as latest notification first. Notifications can be user created or system-generated. Users (PCs and HOD) can create notifications to be sent to other users (faculty). The system can generate notifications when a new task has been assigned, a task is due soon, a task is overdue or completed and profile update status.

Quick Notes

The screenshot shows a web application interface for the 'PSG College of Technology Faculty Management System'. At the top left is the college logo and name. At the top right is a user profile icon. The main content area is divided into two panels. The left panel is a sidebar menu with the following items: DASHBOARD, TASKS, NOTIFICATION, FACULTY INFORMATION, QUICK NOTES (which is highlighted), PROFILE, and ASSIGN TASK. The right panel is titled 'NOTES' and contains a text input area with the following text: 'Hello! I am a simple note', 'I will show up on the dashboard', and 'You can use me to keep reminders'. A 'Save' button is located in the top right corner of the notes panel.

NOTES

Hello! I am a simple note
I will show up on the dashboard
You can use me to keep reminders

DASHBOARD
TASKS
NOTIFICATION
FACULTY INFORMATION
QUICK NOTES
PROFILE
ASSIGN TASK

Quick notes page is a text pad where the user can store any text data as required. This can be used as a scribble pad to make note of anything anytime. This will be visible on the dashboard too and is editable both on this page and on the dashboard. One user will have only one note. Pressing save will save the note in the database.

Testing

Unit Testing

During the developmental phase each functionality or task developed was tested with all the boundary cases. In all the pages, the data entered by the users are properly validated for its type and the type of value it can have. Unit testing of the functionalities are done by generating dummy data in the database.

Integration Testing

All the developed modules are integrated to realize a functionality and it is tested for its appropriateness. This testing helped to make the modules to be more cohesive with that of supporting modules to implement the required functionality.

Incremental-Integration Testing

Incremental-Integration testing was done repeatedly whenever a new feature is added. Every time a new button or functionality was added to a web page, all the other functionality of that page was tested to ensure the new addition had not affected the consistency of the previously working module because of the dependency. Whenever it got affected all the bugs were fixed and then the next task was implemented.

Functional Testing

This test was done several times to check the functionality irrespective of the architecture of the software inside. This testing helped to implement the functionality faster. Once the required task was implemented, then we organized the code such that the software gets to a better architecture. Initially the functionalities were implemented by having a number of communications with the database, but once the tasks were successfully implemented, steps were taken to reduce the communication with the database and thereby improving the performance of the website.

System Testing

Every time a stable product developed was tested for the entire functionality as per the requirements.

Acceptance Testing

Acceptance testing was done to verify whether the software met all the requirements as stated by the college officials.

Usability Testing

The system usability was checked by allowing the naive user to use the system at different levels of development and thereby got feedback from them to improve the usability. Compiling all such feedback the system was implemented with more usability and also with a user-helper video.

Test Cases

Test Case	Test Case Description	Steps	Test Data	Steps to Perform	Expected Result	Actual Result
1	Check assigned task and update status	1	domain-name /home	Launch website	Website opens	Website opens
		2		click on the tasks button	redirects to domain-name /tasks and displays list of latest tasks	redirects to domain-name /tasks and displays list of latest tasks
		3	task 1	Click on task 1	Redirects to domain-name /tasks/expanded and displays detailed information on the tasks	Redirects to domain-name /tasks/expanded and displays detailed information on the tasks

2	Search for HOD details in the Faculty information page	1	domain-name /facultyInformation	Open faculty information page	Faculty information page opens	Faculty information page opens
		2	Search string : HOD	Enter Search string in the search box	The search string is used to identify all	The search string is used to identify all

					possible results. Display the results in order of relevance	possible results. Display the results in order of relevance
		3		Click on the HOD's Card	HOD's Profile is loaded with all necessary details from the Database	HOD's Profile is loaded with all necessary details from the Database

3	HOD Assign Task to faculty	1	domain-name /assignTask	Open assign task page	Assign task page opens	Assign task page opens
		2	Title : Update profile, description : Update profile photo to latest one, assigned_to : John Doe, priority : Low, deadline : 22-jun-2022	Enter Details of the task and press assign	New task assigned to faculty and updated in database	New task assigned to faculty and updated in database

4	Update notes	1	domain-name /quickNotes	Open the Quick notes page	Quick notes page opens and loads the latest saved note	Quick notes page opens and loads the latest saved note
		2	make changes/additions to the note	type in the changes	Notes has been changed in the website	Notes has been changed in the website
		3		Press save button	The changes are saved in the database	The changes are saved in the database
